

## ArvinMeritor Rotor Identification

Reference: PB2006

This guide will assist in identification of 4 primary rotors sold to International Truck and Engine. The part numbers are 23123550, 23123552, 23123572, and 23123573.

- 23123550 and 552 are 10 hole rotors and the same diameter (15 inches). The differences between the two are the height of the rotor lying down.

See dimension "C" in the figure to the left.

- 550 are roughly 3.21 inches.
- 552 are roughly 4.40 inches.

- 23123572 and 23123573 are the same height and the same diameter (15 inches). The difference is the number of holes.
  - 572 = 6 hole
  - 573 = 5 hole

Each of these rotors has the part number, "MERITOR" or "Dayton", and the MIN THICK measurement cast between the rotor mounting flange and barrel section of the rotor. See below for an example.

If you require further assistance, please call the ArvinMeritor OnTrac call center at 866-668-7221.
